Task Title: Creation of AI Course Landing Page

Task Description:

The task involved creating a landing page for an AI course with specific design and content requirements.

Steps Taken:

1. Structured the HTML document with appropriate sections for header, course overview, reviews, and price cards.
2. Styled the landing page using CSS to achieve a visually appealing and responsive design.
3. Incorporated images and content to enhance the user experience.
4. Ensured proper alignment and formatting for various screen sizes using media queries.

Challenges Faced:

1. Balancing design aesthetics with responsiveness for different devices.
2. Choosing suitable colors and styles to match the theme of the AI course.

Solutions Implemented:

1. Utilized media queries to adjust the layout and styling based on screen size.
2. Experimented with color combinations and incorporated feedback from stakeholders.

Learnings:

1. Enhanced proficiency in creating responsive web designs.
2. Gained insights into choosing appropriate colors for thematic consistency.

Project Update:

1. Completed the initial version of the AI course landing page.
2. Ready for feedback and further iterations based on user input.
